

Continuing Our Commitment to Excellence for Your Care

The Ohio State University Wexner Medical Center Dodd Rehabilitation Hospital

Accredited by the Commission on Accreditation of Rehabilitation Facilities since 1975

As a consumer of health care and rehabilitation services, you have a choice. You should choose a facility that has demonstrated a long-standing commitment to meet the nation's highest standards of quality, consumer satisfaction, safety and outcomes measures for rehabilitation, as set by the Commission on Accreditation of Rehabilitation Facilities (CARF). Dodd Rehabilitation Hospital embodies this commitment to continuously improve service quality and to focus on the satisfaction of our patients.

As part of this commitment, Dodd Rehabilitation Hospital voluntarily participates in the CARF International surveying process. CARF International is an independent accrediting body of health and human services. CARF accreditation means that Dodd Rehabilitation Hospital has demonstrated compliance with proven standards for business practices and is strongly committed to continuous quality improvement.

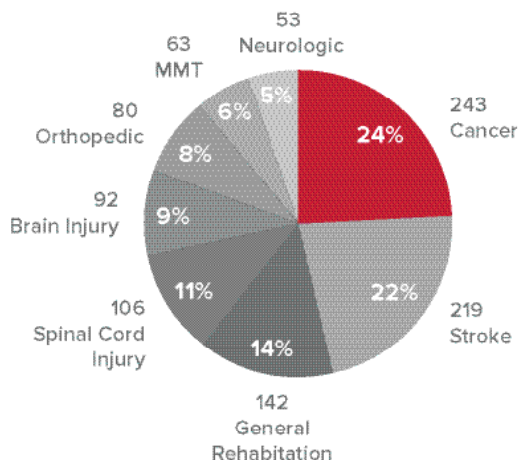

We know you have a choice in your rehabilitation care. We strive to exceed expectations and provide the excellent care that you deserve. We are proud to share these survey results with our current and future patients so you are confident that you are making the best choice for rehabilitation care for yourself or your loved one.

2019 Dodd Rehabilitation Hospital OUTCOMES

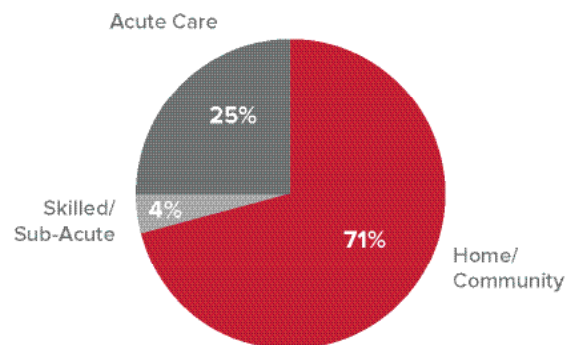

Patient Age/Number

Patients Treated at Ohio State's Inpatient Rehab Services

Patient Discharge Locations

**Data percentages may not total 100% due to incremental statistical rounding. Differences in data equal less than 1%.*

Patient Age/Number

	# of Patients Discharged	³ Case Mix Index (CMI) ³	Average Age	Average Length of Stay	Average FIM ¹ Gain	Average FIM ¹ Gain per day	Discharged to Home/Community	Discharged to Skilled Nursing Facility	Discharged to Acute Care Center	Gender
Brain Injury	172	1.30	53	16.27	23.69	1.46	76%	11%	13%	67% M, 33% F
General Rehabilitation	230	1.28	58	13.25	19.97	1.51	71%	3%	25%	57% M, 43% F
MMT	63	1.81	44	19.57	26.02	1.33	71%	16%	13%	76% M, 24% F
Neurological	55	1.31	58	15.40	24.22	1.57	82%	13%	5%	58% M, 42% F
Orthopedic	115	1.21	63	12.80	21.33	1.67	79%	10%	11%	44% M, 56% F
Spinal Cord Injury	130	1.72	56	18.83	20.93	1.11	68%	17%	15%	67% M, 33% F
Stroke	233	1.47	63	15.24	24.00	1.58	72%	17%	11%	51% M, 49% F
Cancer	243	1.28	61	13.60	18.45	1.36	71%	8%	21%	57% M, 43% F
Total	1,241²									

Data source February 2020, UDS ProCentral (based on discharges 1/1/19 - 12/31/19).

¹ Functional Independence Measure (FIM) is an 18 item scale measuring improvement in motor and cognitive ability

² Total number of patients served in the specific categories includes a population of 243 oncology patients who are counted under both the oncology and an appropriate secondary impairment population. We want to be as clear as possible about the number of patients we treat in each impairment category, so the 243 specific patients were included in both categories, as appropriate for their care needs. Total unique patient number is 998 patients in 2019.

³ Case Mix Index (CMI) reflects the diversity, clinical complexity, and resource needs of all the patients in the hospital. A higher CMI indicates a more complex and resource-intensive case load. A lower CMI indicates a less complex and resource-intensive patient case load.

Category descriptions:

General Rehabilitation includes cardiac, pulmonary, debility, burn, arthritis and pain patients.

MMT (Major Multiple Trauma) includes patients with both major multiple trauma including brain injury/spinal cord injury and patients with major multiple trauma who had no brain injury/spinal cord injury.

Orthopedic includes orthopedic and amputation patients.

WE LOOK FORWARD TO CARING FOR YOU
